

## **ABSTRACT**

One of the most time consuming jobs in the current scenario of the educational system is to understand the level to which the students understand the topics that have been taught in the class. The objective of the project is to improve the standard of higher education by using ICT (Information Communication Technology). The proposed system will collect real time appraisals from students through the Android application. Gathered appraisal will be sent to the faculty, this will assist the faculty to know the level of understanding of concepts by the students. This will help the faculty for better planning and delivery of lectures. The proposed mechanism will collect appraisals from the students instantly. This provides the faculty an insight to the level of understanding of the covered topics. On the whole standard of education in educational institutions can be improved using the proposed system.
